

B1 - Unix System Programming

B-PSU-100

my_sokoban

Bootstrap

my_sokoban

binary name: my_popup

language: C

compilation: via Makefile, including re, clean and fclean rules

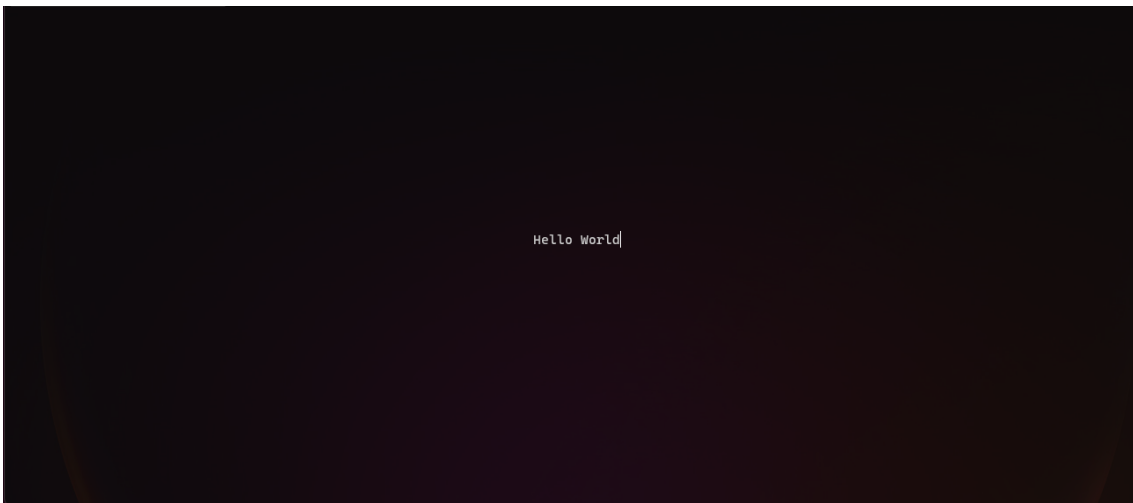

- The totality of your source files, except all useless files (binary, temp files, obj files,...), must be included in your delivery.

Your binary must be built with the **ncurses** library.

Write a program called `my_popup`, which takes a character string as parameter and displays it in the very middle of the terminal (in both height and width).

The program will exit by erasing the screen as soon as the user presses the space bar.

```
Terminal
~/B-PSU-100> ./my_popup "Hello World"
```

Only the project authorized functions are allowed here.
